

Learn-to-Lead Study with Cathy Fosnot this summer!

Cathy Fosnot is the author of over 20 books on math education and the Founding Director of Mathematics in the City (MitC), a national center for professional development at The City College of New York.

2-day Learn to Lead Seminars prepare participants to lead workshops with the online platform materials back at their respective sites. They are comprised of small groups no larger than 15 and are held in New London, CT at Cathy's home on the beach. Bed and Breakfast is included in the price: \$1495 per person.

The seminar begins with participants working with the online platform themselves, as learners. This year the primary focus will be the role of representation during minilessons K-8, and conferring and questioning during investigations. Subsequent reflection and discussion on the professional development activities and the way in which a facilitator can implement them provide insights into how participants might in turn do similar activities back at their respective sites. On the second day, the role of a blended learning approach to professional development is discussed and subsequent study of the newly published landscapes of teacher development forms the basis for thinking about plans for systemic change back at participants' sites.

- Learn how to use P2S2: a personalized professional support system, New Perspectives' digital PD platform back at your site.
- Become part of a small group of leaders from across the nation for an intense 2-day institute on facilitating teacher change.
- Study the 6 landscapes of teacher development and learn how to support growth through the process of co-teaching.
- Learn how to support teachers to confer and question in powerful ways.
- Help teachers to help children feel like "real mathematicians" at work.
- Analyze the use of various models as tools for representation to develop numeracy.
- Examine the development of teachers' ideas about proof.
