August 23rd, 24th, 25th**

**Centre for Leadership and Learning
300 Harry Walker Parkway South
Newmarket, Ontario, CAN**

Cathy Fosnot is the author of over 20 books on math education and was the founding director of Mathematics in the City at the City College of New York. Currently she is the President and CEO of New Perspectives on Learning, LLC.

www.NewPerspectivesOnLearning.com

In 2015, Cathy Fosnot and Maarten Dolk released P2S2™— a powerful, new, online, personalized, professional support system. Quickly taking the U.S. and Canada by storm, it is changing the way PD is done. Using a rich library of video of teachers and children *doing* mathematics, some of which was filmed in Canadian classrooms, the system provides on-demand personalized support for each of Cathy's CFLM units to teachers new to math workshop, as well as deeper study on more general topics such as conferring and questioning, deepening your own mathematics, planning congresses, representation, proof, and the landscapes of learning.

This 3-day intensive learning experience is designed for coaches, math curriculum leaders, administrators, and professors to prepare them to lead workshops, run PLCs, or design their own blended learning experiences and e-courses with NP's online platform materials back at their respective sites. The role of a blended learning approach to professional development and ways to monitor and document growth on landscapes of teacher change will also be discussed. All participants will receive a 2-month free license of P2S2™ to use back at their respective sites as part of the registration fee.

- Learn how to use P2S2: a personalized professional support system, New Perspectives' digital PD platform back at your site.
- Become part of a small group of leaders from across Canada for an intense 3-day institute on a blended learning approach for PD.
- Study 6 landscapes of teacher development and learn how to support teacher growth and development along them with P2S2
- Bring real children (K-8) engaged in vibrant math communities into your workshop or university settings.
- Learn how to use the platform in a variety of ways: for designing your own online courses, running PLCs, and providing on-demand support between coaching or workshop sessions
- Deepen your own mathematics.
